Design a complete MiniDisc print set

MD Label Studio combines release information, artwork, MiniDisc-specific geometry and print preparation. The current Universal application is version 1.2 build 150 for x86_64 and arm64.

Before you begin

- Use macOS 13.5 or later and keep enough storage for artwork and exported PDFs.
 - Keep original artwork outside the project as a separate backup.
 - Real printer margins, colour management, cutter registration and media feed require physical output tests.
-

From a blank project to a PDF

Choose a layout

Select Full Face MD, Front Label MD, Track List, Spine / Back Label or Plotter Cut.

Enter release data

Add album, artist, year and track data. Review any metadata match before applying it.

Add artwork

Drop or choose artwork, then set crop, positioning and colour options for the selected slots.

Preflight and export

Run project validation, resolve warnings, select the output layout and create the PDF.
