MD Mac CD RIP Pro

The application combines optical-drive setup, release metadata, secure Test & Copy workflows and organized output in one native macOS workspace.

DRIVE PROFILE	Measure drive features and keep its reading settings together.
TEST & COPY	Compare read passes with CRC results and review the operation log.
COMPLETE OUTPUT	Save audio, metadata, artwork, CUE sheets and playlists together.

A reviewable Test & Copy sequence

Detect the drive

Insert an audio CD, select the exact drive profile and read the TOC.

Review metadata

Compare candidate releases, catalogue data, track order and artwork before applying.

Choose output

Select WAV, FLAC or MP3, track or image layout, CUE/M3U and destination.

Test & Copy

Run secure reading, compare Test and Copy CRC, then review logs and final files.

The final result depends on the optical drive, disc condition, network access to metadata services and the selected output settings.
