What the application does

MD Record Studio is a native macOS workspace for compatible Sony NetMD decks and portable recorders. It reads the disc TOC, shows capacity and codec information, manages titles and track order, controls playback, and prepares supported audio files for recording.

Requirements

- macOS 13.5 or later.
 - Current verified Universal build: 1.1 (450), x86_64 and arm64.
 - A compatible Sony NetMD USB device and a writable MiniDisc for hardware operations.
 - Universal compatibility with every NetMD or Hi-MD model is not claimed.
-

Your first NetMD session

Connect

Insert a MiniDisc, connect the NetMD device directly by USB and press Connect.

Read the TOC

Wait until the disc title, tracks, codec and remaining capacity are visible.

Organize

Edit titles, reorder tracks or import names from CSV. Refresh the TOC after changes.

Record safely

Choose SP, LP2, LP4 or Mono, add supported files to the queue and review capacity before writing.
